INSPECTOR'S SEAM TESTER

- **ELIMINATE COSTLY MISTAKES!**
- **PERFECT FOR EPDM, TPO, PVC, AND ALL MEMBRANES!**

Are you using a modified cotter pin puller or modified screw driver to inspect membrane seams?
Are you damaging seams in the process?

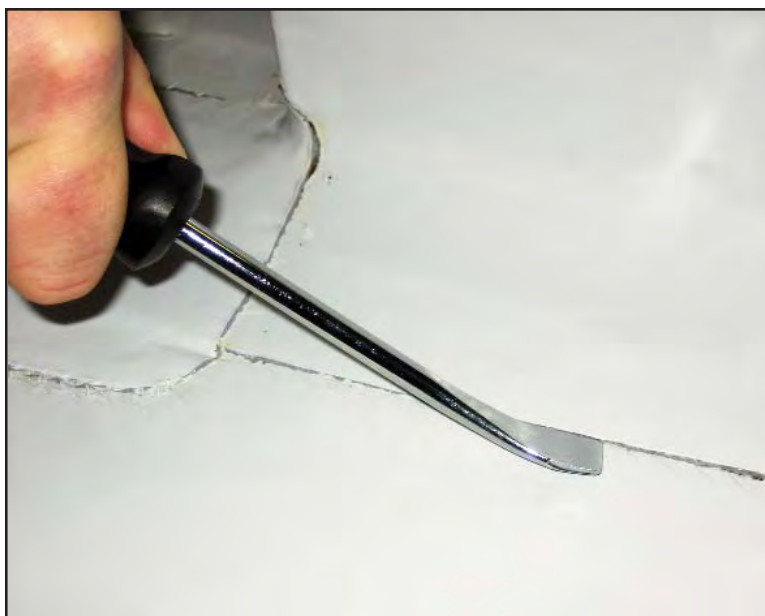

You need Everhard's MM21090 Inspector's Seam Tester -- specifically designed for the inspection of membrane seams.

In EPDM applications, probe seams quickly without risk of damaging membrane or seam.

In TPO and PVC applications, probe seams in the "transition areas" where the robot seam weld ends and hand seam weld begins.

- **Rounded Corners**
- **No Sharp Edges**
- **Flared Tip**

Benefits include:

- Blade tip has rounded corners, minimizing chance for damage when inspecting membrane seams.
- Heat-treated high carbon steel for wear resistance and long life (will outlast a cotter pin puller or screwdriver).
- Ergonomic handle provides greater comfort and a more secure grip.
- Ergonomic blade moves the user's hand away from the surface area allowing greater clearance for hand and knuckles.

MODEL #	DESCRIPTION	WT. (LBS.)
MM21090	Inspector's Seam Tester -- Ergonomic soft grip handle, 8" overall length with 4" extension	0.175
